Details of Course Structure: F. Y. B.Tech. w.e.f. A.Y. 2023-24

• Summary of Credits and Total Marks for U.G. Programme:

Semester	Group -A		Group -B	
	Credits	Marks	Credits	Marks
I	20	700	20	700
II	22	800	22	800
Total	42	1500	42	1500

• Definition of Credit:

The Under Graduate (U.G.) and Post Graduate (P.G.) programmes will have credit system. The details of credit will be as follow
1 **Credit** = 1 hour/week for **lecture**
= 2 hours/week for practical
= 1 hour /week for tutorial

• Abbreviations : TH:Theory PR : Practical TU : Tutorial OR:Oral CCE:Continuous Comprehensive Evaluation TW: Term work

• Description of Groups:

Group A = Divisions of Computer, IT, E&TC, AI&DS, CSD, Electrical and Robotics & Automation — 12 divisions
Group B = Divisions of Mechanical, Civil, Chemical — 5 divisions

• Description of various Courses:

Type of Course	Description	Type of Course	Description
ESC	Engineering Science Courses	PCC	Program Core Course
BSC	Basic Science Courses	PEC	Program Elective Courses
CC	Co-curricular courses (Liberal learning courses)	OE	Open Elective Courses of other than particular program
CEP/FP	Community Engagement/ Field	VEC	Value Education Courses
OJT	On Job Training	ASM	Additional Specialized / MOOCs
MD M	Multidisciplinary Minor	HSSM	Humanities, Social Science and Management
AEC	Ability Enhancement Course	VSEC	Vocational and Skill Enhancement Course
RP	Research Project	RM	Research Methodology

Note: The Induction Programme for First year students will be conducted for 2 weeks in First Semester and 1 week in Second Semester before commencement of teaching as per A.I.C.T.E. guidelines.

Prerequisite Courses: -			
Course Objectives: To introduce concepts of Matrices and system of linear Equations, linear and orthogonal transformations. To introduce concepts of Eigen values and Eigen Vectors. To introduce concepts of Partial Differentiation. To introduce concepts of Jacobians, Maxima and Minima, errors and Approximations. To introduce fundamental concepts of probability. To introduce computational tools for solving mathematical problems.			
Course Outcomes: On completion of the course, students will be able to–			
	Course Outcomes		Bloom's Level
CO1	Interpret the concepts of Jacobians, rank, quadratic form, canonical form, transformations, Eigen values, Eigen vectors and probability.	2-Understanding	
CO2	Solve problems on linear algebra, partial derivatives and probability.	3- Apply	
CO3	Apply concepts of linear algebra, differential calculus and probability to engineering problems.	3- Apply	
CO4	Use computational tools for solving mathematical problems.	3- Apply	
CO5	Analyze the nature of quadratic forms, extreme values of the function, error and approximations.	4 -Analyze	
COURSE CONTENTS			
Unit I	Matrices and Linear System of Equations	(07hrs+2hrsTutorial)	COs Mapped - CO1, CO2, CO3
Rank of a matrix, system of linear Equations, Linear Dependence and Independence of vectors, Linear and orthogonal transformations, Application to system of linear equations.			
Unit II	Eigen Values and Eigen Vectors	(08hrs+2hrsTutorial)	COs Mapped - CO1, CO2, CO3, CO5
Eigen values & Eigen vectors, diagonalization, quadratic forms and reduction of quadratic forms to canonical forms, applications of Eigen values and Eigenvectors.			

Unit III	Partial Differentiation	(07hrs+ 2hrsTutorial)	COs Mapped -CO2, CO3
Introduction to functions of two or more variables, Partial Differentiation, Euler's Theorem on Homogeneous Functions, Partial differentiation of Composite and Implicit functions, Total derivatives.			
Unit IV	Application of Partial Differentiation	(07hrs+ 2hrsTutorial)	COs Mapped - CO1, CO2, CO3, CO5
Jacobians, Functional Dependence & Independence, Errors and Approximation, Maxima and Minima of Functions of two variables, Lagrange's method of undetermined multipliers.			
Unit V	Introduction to Probability and Counting	(07hrs+ 2hrsTutorial)	COs Mapped - CO1, CO2, CO3
Interpreting probabilities, Relative frequency and classical definition of probability, sample spaces and Events, mutually exclusive events, Permutations and Combinations, Axioms of probability, Addition rule, conditional probability, multiplication rule, Independent Events, Bayes' Theorem.

Prerequisite Courses, if any: -			
Course Objectives: To acquire the knowledge of electro-analytical techniques that facilitates rapid and precise understanding of materials. To understand structure, properties and applications of speciality polymers, nano material and alloys. To study conventional and alternative fuels with respect to their properties and applications To understand technology involved in analysis and improving quality of water as commodity. To understand corrosion mechanisms and preventive methods for corrosion control.			
Course Outcomes: On completion of the course, students will be able to–			
	Course Outcomes	Bloom's Level	
CO1	Describe different techniques used for chemical entities present in fluids, fuel, polymer, alloys.	1-Knowledge	
CO2	Select appropriate technology involved in determination of purity and properties of material.	2- Understand	
CO3	Illustrate causes and preventive measures of ill effect of hard water and corrosion	3-Apply	
CO4	Analyse the fluids, fuels and selection of appropriate purification methods.	3-Apply	
CO5	Compare composition of fuels, purity of water and mitigation for corrosion control	4-Analyze	
COURSE CONTENTS			
Unit I	Cells, Batteries and Electro analytical Techniques	(8hrs)	CO1,CO4
<p>Introduction: Dry cell, alkaline battery, Ni-Cd battery, H₂O₂ fuel cells, Lithium ion battery. Reference electrode (calomel electrode), ion selective electrode (combined glass electrode). Conductometry: Introduction, conductometric titrations of acid versus base with titration curves (SA-SB). pHmetry: Introduction, standardization of pH meter, pH metric titration of strong acid versus strong base with titration curve. UV-Visible Spectroscopy: Introduction, interaction of electromagnetic radiation with matter, statement of Beer's law and Lambert's law, different electronic transitions, terms involved in UV-visible Spectroscopy.</p>			

Unit II	Fuels	(8hrs)	CO1, CO4, CO5
Introduction, classification, Calorific value (CV): Gross calorific value (GCV) and Net calorific value (NCV), Determination of Calorific value: Bomb calorimeter, Solid fuel: Coal: Analysis of Coal-Proximate and Ultimate analysis, Liquid fuel: Petroleum: Refining of petroleum, CNG, Hydrogen gas as a fuel. Alternative fuels: Power alcohol, biodiesel and Rocket propellants, Knocking in engines, octane number and cetane number.			
Unit III	Introduction to Engineering Materials	(8hrs)	CO1, CO2
Solid: crystalline and amorphous solids, Polymorphism, unit cell, crystal system-cubic, APF. Metallurgy-Ores and Minerals, Alloys- classification. Composition, woods metal, brass, Bronze, Ti-alloys. Preparation of alloys by fusion and powder method. Introduction of polymer: Terms-Speciality polymers: Introduction, structure, properties and applications of the polymers: 1. Bio-degradable polymers: Poly (hydroxybutyrate-hydroxyvalanate), 2. Conducting and doped conducting Polymer: Polyacetylene 3. Polymer Composite, Nanomaterials: Introduction, definition, classification of nanomaterials based on dimensions, properties and general applications.			
Unit IV	Analytical Aspects of Fluids	(8hrs)	CO1, CO2, CO3, CO4, CO5
Properties of Fluids-Surface Tension, Capillary action , Viscosity, Vapour Pressure, Types of Fluid Liquid Fluid- Water and Oil Water: hardness of water: Types, Determination of hardness by EDTA method, Chloride content in water by Mohr's method, Ill effects of hard water in boiler, External Treatment of water i) Zeolite method ii) Demineralization method. Purification of water: Reverse osmosis. Oil: Aniline point, Flash Point, Fire point. Gaseous fluids: Gas Sensors, Types of Gas sensors			
Unit V	Corrosion Science	(8hrs)	CO3, CO5
Introduction, Types of corrosion – Dry and Wet corrosion, mechanism, nature of oxide films and Pilling-Bedworth's rule, hydrogen evolution and oxygen absorption, Factors influencing rate of corrosion. Methods of corrosion control: cathodic protection, Metallic coatings and its types, Galvanizing and Tinning, Electroplating, Powder coating.

Guidelines for Laboratory Conduction		
<p>1. Teacher will brief the given experiment to students its procedure, observations calculation, and outcome of this experiment.</p> <p>2. Apparatus, chemicals, solutions and equipments required for given experiment will be provided by the lab assistants using SOP.</p> <p>3. Students will perform the same experiment in a group (two students in each group) under the supervision of faculty and lab assistant. After performing the experiment students will check their readings, calculations from respective teacher.</p>		
Guidelines for Student's Lab Journal		
Write-up should include title, aim, diagram, working principle, procedure, observations, graphs, calculations, conclusion and questions, if any.		
Guidelines for Term work Assessment		
Each experiment from lab journal is assessed for thirty marks based on three rubrics. Rubric R-1 for timely completion, R-2 for understanding and R-3 for presentation/journal writing where each rubric carries ten marks.

COURSE CONTENTS			
Unit I	Work, Power, Energy, Batteries and Supplies	(8hrs)	COs mapped - CO1, CO4
Work, Power, Energy: Effect of temperature on resistance, resistance temperature coefficient, insulation resistance, conversion of energy from one form to another in electrical, mechanical, and thermal systems. Batteries and Power Supply: Charging and discharging of batteries, the concept of depth of charging, maintenance of batteries, series-parallel connection of batteries, Introduction to UPS, SMPS			
Unit II	DC circuits	(8hrs)	COs mapped - CO1, CO4
Types of electrical circuits, KVL and KCL, sources and source transformations, star-delta connection, Superposition, and Thevenin's theorem			

Unit III	AC Circuits	(8hrs)	COs mapped - CO1, CO4
Representation of sinusoidal waveforms, peak and RMS values, Phasor representations, real power, reactive power, apparent power, power factor, analysis of single-phase AC circuits consisting of pure R, L, C, series R-L, R-C, R-L-C combinations, parallel AC circuit, series, and parallel resonance			
Unit IV	Three-phase circuits and Electrical Installations	(8hrs)	COs mapped - CO3, CO4, CO5
Three-Phase Circuit: Three-phase balanced circuits, voltage and current relations in star and delta connections, and power calculations. Electrical Installations: Components of LT Switchgear: fuse MCB, ELCB, types of wiring, earthing.			
Unit V	Electrical Machines	(8hrs)	COs mapped - CO1, CO3, CO5, CO6
Transformers: Construction, principle, e.m.f. equation, ideal and practical transformer, vector diagram for ideal transformer, losses, regulation and efficiency, Introduction to Auto-transformer. Electrical machines: Construction, working principle and types of DC generator and motor, construction, working principle and applications of stepper motor.

4	Draw a flowchart/write an algorithm / a pseudo-code and write a menu driven C program to perform following string operations using library and user defined function: i. Find length of a string ii. Copy a string iii. Concatenate the string iv. Compare two strings	CO1,CO2, CO3,CO4
5	Draw a flowchart/write an algorithm / a pseudo-code and write a C program using functions to perform the following operations: i. Addition of Two Matrices ii.Multiplication of Two Matrices iii.Transpose of a given matrix	CO1,CO2, CO3,CO4
6	Draw a flowchart, write an algorithm / a pseudo-code and write a C program using a function to test whether the given number is a prime number and also to find smallest divisor, GCD, LCM of the given number	CO1,CO2, CO3,CO4
7	A company desires to maintain a database of its customer by recording information about customers such as name, mobile, gender, city etc. The sales department personnel would like to get i. Customers with all the details, ii. Customers and their mobile numbers, iii. Customers from a given city Draw a flow-chart, write an algorithm / a pseudo-code and develop a menu driven application to provide above functionalities	CO1,CO2, CO3,CO4, CO5

Guidelines for Laboratory Conduction

Use coding standards such as variable naming conventions, use of constants, proper indentation, comments and documentation

For each assignment, students should write number of lines of code, various errors encountered and test cases used to test the program

Students should incorporate functionalities mentioned in boldface in the assignments

In addition to above eight assignments, students may develop an application in consultation with the teacher

Guidelines for Student's Lab Journal

The laboratory assignments are to be submitted by students in the form of a journal. Journal consists of Certificate, table of contents, and handwritten write-up of each assignment (Title, problem statement, theory concepts in brief, algorithm, flowchart, test cases and conclusions). Program codes with sample outputs shall be submitted in soft form.

Guidelines for Term work Assessment

Continuous assessment of laboratory work shall be based on the overall performance of a student.

Assessment of each laboratory assignment shall be based on rubrics that include

R1- Timely completion (10) – Full marks if submitted in time, 5 marks otherwise,

R2- Understanding of assignment (10) Full marks for accurate flowchart, algorithm / pseudo-code and working code

R3- Use Coding standards, proper documentation, neatness of writeup (10) – 5 marks for coding standards and documentation and 5 marks for neatness of write up.

List of Laboratory Experiments / Class Assignments		
Sr. No.	Laboratory Experiments / Class Assignments	COs Mapped
1	<p>English Language Basics – Class Assignments Fundamentals of English grammar, Vocabulary Building, Developing basic writing skills and Identifying Common Errors in Writing</p>	CO1
2	<p>Listening and Reading Skills a. Listening Worksheets using Language Lab Software Each student will be given specifically designed worksheets that contain blanks / matching / MCQs that are designed to an audio (chosen by the faculty). Students have to listen to the audio (only once) and complete the worksheet as the audio plays. This will help reiterate active listening as well as deriving information (listening to information between the lines) b. Reading Comprehension Worksheets to be distributed/displayed to students. – Class Assignments Teacher will choose reading passages from non-technical domains, design worksheets with questions for students to answer. This will enhance student's reading skills by learning how to skim and scan for information.</p>	CO1
3	<p>Writing Skills a. Letter / Email Writing – Lab Experiment After explaining to the students the highlights of effective writing, students can be asked to write (using digital platforms / paper-based) letter to an organization with the following subject matter, i. Requesting opportunity to present his/her product. ii. Complaining about a faulty product / service. iii. Apologizing on behalf of one's team for the error that occurred. iv. Providing explanation for a false accusation by a client. b. Abstract Writing – Class Assignment Teacher will choose a newspaper article / short stories and ask students to write an abstract.</p>	CO1
4	<p>Speaking Skills / Oral Communication – Part A a. One minute Self Introduction – Class Assignment Explain how to introduce oneself in a professional manner and presenting oneself positively Name, Academic Profile, Achievements, Career Aspirations, Personal Information (hobbies, family, social). b. Presentations – Lab Experiment Every student will have to choose a topic of his/her choice and make a 5-minute presentation using audio-video aids / PPT. Every student will make two presentations on – one technical and other non-technical topic. Focus and evaluation of each presentation should be the depth of knowledge about the topic, originality of perspective on the topic, well-researched or not, verbal and non-</p>	CO5, CO2

	verbal skills and ability to answer questions effectively. Plagiarism should be discredit and students should be instructed about it.	
5	<p>Speaking Skills / Oral Communication – Part B</p> <p>a. Group Discussion – Lab Experiment / Class Assignment</p> <p>The class will be divided into groups of 5-6 students for a discussion lasting 15 minutes. Topics should be provided by teachers. After each group finishes its discussion, the teacher will give critical feedback including areas of improvement. The teacher should act as a moderator / observer only</p>	CO1, CO5, CO2, CO3
6	<p>Extempore</p> <p>Various topics will be laid out in front of the audience and each student is to pick one topic and speak about the topic for 5 minutes followed by Q&A from audience. Teacher will evaluate each student based on thinking ability, content, communication skills, logical and cohesive presentation of topic, perspective of student, ability to handle questions and respond positively</p>	CO1, CO2
7	<p>SWOC Analysis</p> <p>a. Focus on introspection and become aware of one’s Strengths, Weakness, Opportunities and Challenges. Students can write down their SWOC in a matrix and the teacher can discuss the gist personally.</p> <p>b. Resume Writing</p> <p>The teacher should conduct a brief session outlining the importance of a CV / Resume and students can write / type out their own resumes</p> <p>i. Share various professional formats.</p> <p>ii. Focus on highlighting individual strengths.</p> <p>iii. Develop personalized professional goals / statement at the beginning of the resume.</p>	CO4
Guidelines for Laboratory Conduction		
<p>The teacher may design specific assignments that can highlight the learning outcomes of each unit. Each activity conducted in the lab should begin with a brief introduction of the topic, purpose of the activity from a professional point of view and end with the learning outcomes as feedback from students. Most of the lab sessions can be designed to be inclusive; allowing students to learn skills experientially; which will benefit them in the professional environment. Every student must be given sufficient opportunity to participate in each activity and constructive feedback from the instructor / facilitator at the end of the activity should learn towards encouraging students to work on improving their skills. Activities should be designed to respect cultural, emotional and social standing of students. Some of the activities can be designed to cater to enhancement of multiple skills – e.g. Team Building Activity can highlight ‘open communication’, ‘group discussion’, ‘respecting perspectives’, ‘leadership skills’, ‘focus on goals’ which can help students improve their inherent interpersonal skills. At least one session should be dedicated to an interactive session that will be delivered by an expert from the industry; giving the students an exposure to professional expectations.</p>		
Guidelines for Student's Lab Journal		
<p>Each student should have a Lab Workbook (sample workbook attached) which outlines each lab activity conducted. The student must respond by writing out their learning outcomes and elaborating the activities performed in the lab., group discussion, group exercises and interpersonal skills and similar other activities/assignments.</p>		
Guidelines for Termwork Assessment		
<p>Continuous assessment of laboratory work is to be done based on overall performance and lab assignments and performance of student. Each lab assignment assessment will be assigned grade/marks based on parameters with appropriate weightage. Suggested parameters for overall assessment as well as each lab assignment assessment include- timely completion, performance, punctuality, neatness, enthusiasm, participation and contribution in various activities-SWOC analysis, presentations, team activity, event management</p>

COURSE CONTENT S			
Unit I	Workshop Safety and Maintenance	(2hrs)	COs Mapped- CO3
a. Introduction to Workshop Safety: Introduction to workshop safety norms and guidelines. Identifying potential hazards in a workshop. Proper usage of personal protective equipment (PPE). Safety guidelines for handling various tools and equipment. Emergency procedures and first aid basics. b. Workshop Maintenance and Housekeeping : Importance of workshop maintenance and cleanliness. Regular maintenance of tools and equipment. Workshop layout and organization for efficient workflow. Proper storage of tools and materials to ensure longevity.			
Unit II	Measurement and Introduction to Welding	(2hrs)	COs Mapped- CO2
a. Measurement and Metrology: Importance of accurate measurement in workshop practice. Various measuring tools and their uses – vernier calipers, micrometers, rulers, etc. Metrology and its role in quality control. Understanding measurement units and conversions. b. Introduction to Welding Shop: Overview of Welding Shop and its applications. Understanding the arc welding process and its principles. Safety precautions for welding operations. Demonstration of simple welding tasks.			

Unit III	Machine Tools	(2hrs)	COs Mapped- CO1,CO2
<p>a. Demonstration of Conventional Machine Tools: Introduction to Lathe and its components. Understanding the Milling Machine and its operations. Practical applications of Lathe and Milling Machine in different industries. Safety guidelines while operating conventional machine tools.</p>			
<p>b. Introduction to CNC Machine Tools: Understanding CNC (Computer Numerical Control) technology. Types of CNC machines - CNC turning, VMC (Vertical Machining Center), and plasma arc machining, CNC wood router, etc. Detailed demonstration of any one CNC process, including a programming assignment. Safety considerations specific to CNC machine operations.</p>			
Unit IV	Introduction to 3D Printing	(2hrs)	COs Mapped- CO2
<p>a. 3D Printing: Overview of 3D printing technology and its applications. Step-by-step process of 3D printing, from design to printing. Software used in 3D printing - creating a design, exporting STL file, choosing parameters, and generating Gcode. Safety measures while handling 3D printing equipment and materials.</p>			
<p>b. Materials and Their Properties: Overview of common workshop materials - metals, wood, and plastics. Physical and mechanical properties of materials. Material selection criteria for specific projects. Recycling and sustainable practices in the workshop.</p>			
Unit V	Workshop Projects, Problem-Solving and Troubleshooting	(02hrs)	COs Mapped -CO4
<p>a. Introduction to Workshop Projects: Planning and executing workshop projects. Understanding project requirements and specifications. Breakdown of complex tasks into smaller achievable steps. Importance of teamwork and collaboration in workshop projects.</p>			
<p>b. Problem-Solving and Troubleshooting: Approaches to problem-solving in workshop scenarios. Common issues and challenges in workshop practice. Troubleshooting techniques for tools and equipment. Encouraging a proactive approach to tackle workshop-related problems.</p>

Guidelines for Student's Lab Journal

The laboratory assignments are to be submitted by students in the form of a journal. Journal consists of Certificate, table of contents, and handwritten write-up of each assignment (Title, problem statement, theory concepts in brief, algorithm, flowchart, test cases and conclusions). Program codes with sample outputs shall be submitted in soft form.

Guidelines for Termwork Assessment

Continuous assessment of laboratory work shall be based on the overall performance of a student. Assessment of each laboratory assignment shall be based on rubrics that include R1- timely completion (10) R2- understanding of assignment (10) R3- Use Coding standards, proper documentation, neatness of writeup (10) – 5 marks for coding standards and documentation and 5 marks for neatness of write up

Preamble

Experiential learning involves a number of steps that offer student a hands-on, collaborative and reflective learning experience which helps them to “fully learn new skills and knowledge”. During each step of the experience, students will engage with the content, the instructor, each other as well as self-reflect and apply what they have learned in another situation.

Students undergo the Experiential Learning through following phases of Engineering Exploration, Engineering Design and Product Realization. Students will undertake mini projects to acquaint with knowledge in the various domains of Engineering.

The course introduces students to analyzing, designing, developing, testing, report writing and project presentations that demonstrate understanding. Students will be asked to observe, document, raise questions and draw conclusions. Teachers rely on a variety of resources to enrich students’ studies that may include meeting experts and hands-on experimentation.

Guidelines for Course Conduction

- There should be a group of 4-5 students.
- Groups will be monitored by the Course teacher.
- Following two assignments will be completed by all groups
 - A) Exploration of an Engineering product like Electronic Voting Machine, Car, Mobile handset, Elevator / Escalator, Operation Table, Solar water heater. The exploration will be based on working principle, specifications, material used, manufacturing process, technology used, operations (observable and controllable), ergonomics, extent of automation, safety features, environmental issues, maintenance and costing.
 - B) Teachers will identify 12-15 mini project ideas.
- Every group will undertake a mini project in consultation with the Course teacher.
- Project ideas will be common to all first year divisions but the implementation might be different.
- The students will plan, manage and complete the associated tasks.

Guidelines for Course Completion

Students will present/submit the Mind Map of the Engineering product chosen for exploration. Students will exhibit/demonstrate the completed project at the end of the semester along with a brief report in a recommended format as term work submission.

Guidelines for Term work Assessment

The Course teacher is committed to assess and evaluate the students’ performance. Progress of work done will be monitored on weekly basis.

During process of monitoring and continuous assessment, the individual and team performance is to be measured.

- Individual assessment for each student should be based on understanding individual capacity, role and involvement in the Engineering Product Exploration/project.
- Group assessment should be based on roles defined, distribution of work, intra-team communication and togetherness.
- Documentation and Demonstration.

It is recommended that all activities are to be recorded regularly and proper documents are to be maintained by both students as well as the course teacher.

Continuous Assessment Sheet (CAS) is to be maintained by the Course teacher.

- A) Recommended parameters for assessment of Engineering Product Exploration: (25marks)
- Working principle, specifications, material used, manufacturing process, technology used, operations (observable and controllable), ergonomics, extent of automation, safety features,

environmental issues, maintenance and costing.

B) Recommended parameters for assessment of Project: (25marks)

- Outcomes of Mini Project / Problem Solving Skills/ Solution provided/ Final product **(50%)** (Individual assessment and team assessment)
- Documentation (Gathering requirements, design & modeling, implementation/execution, use of technology and final report, other documents) **(25%)**
- Demonstration (Presentation, User Interface, Usability, Participation in Exhibition/Contest etc) **(15%)**
- Awareness /Consideration of – Environmental / Social / Ethical / Safety /Legal aspects **(10%)**

Internship guidelines to obtain UG Certification after FY

Unfortunately if any student could not continue his Engineering after FY B. Tech. and desires to Exit the programme for such student Internship provides an excellent opportunity to become Industry ready. For this student must have completed first year by obtaining 42 credits of first year. The duration of internship shall be of 3 to 4 weeks and to be carried out during summer vacation either in an industry in an offline/online manner or through on campus training programmes conducted by industry experts/faculty. It is mandatory for such students to earn 2 credits.

Detail Guidelines:

Duration:

- Internship is to be completed after successful completion of both the semesters of first year for 3 to 4 weeks duration.

Internship work Identification:

Students may choose to undergo Internship at Industry / Govt. Organizations / NGO / MSME etc. in consultation with the faculty mentor.

Students must get Internship proposals sanctioned from college authority. Internship work identification process should be initiated in the 2nd semester in consultation with the faculty mentor and training and placement cell / internship cell. This will help students to start their internship work in time.

Student can take internship work in the form of the following but not limited to:

- Training programmes conducted by industry experts/faculty
- Learning at Departmental Lab/ Institutional workshop/ start-ups cells of institute
- Internships offered by Government Organization/AICTE Registered industries on their portal
- In-house product development, micro/small/medium enterprise/online internship

Internship Diary/ Internship Workbook:

Students must maintain an Internship Diary/ Internship Workbook. The main purpose of maintaining diary/workbook is to cultivate the habit of documentation. The students should record in the daily training diary the day-to-day account of the observations, impressions, information gathered and suggestions provided, if any. The training diary/workbook should be signed every day by the assigned

supervisor.

Internship Diary/workbook and Internship Report should be submitted by the students along with attendance record and an evaluation sheet duly signed and stamped by the industry to the Institute immediately after the completion of the training.

Internship Work Evaluation:

The evaluation of these activities will be done by faculty mentor and Industry Supervisor based on- Overall compilation of internship activities, sub-activities, and the level of achievement expected, evidence needed to assign the points and the duration for certain activities.

Assessment and Evaluation shall be carried out jointly by appointed pair of examiners. Following are the suggested Rubrics for evaluation

Rubric	Parameters
R1	Evaluation of intern by industry supervisor
R2	Technical Knowledge
R3	Presentation Skills
R4	Viva Voce
R5	Report

Monitoring & evaluation of internship

The industrial training of the students will be evaluated in three stages:

- Evaluation by Industry.
- Evaluation by faculty supervisor on the basis of site visit(s) or periodic communication.
- Evaluation through seminar presentation/viva-voce at the Institute (This evaluation can be reflected through marks assigned by pair of examiners).

Evaluation through Seminar Presentation/Viva-Voce at the Institute-

The student will deliver a seminar based on his/her work carried out during internship, before the appointed panel constituted by the concerned department as per norms of the institute.

After completion of Internship, the student should prepare a report to indicate what he/she has observed and learnt in the training period. The report must have include Cover Page, Internship completion certificate , Internship Place Details- Company background, Supervisor details, Index, details of the work completed during internship, conclusions, Attendance Record, Acknowledgement, List of reference (Library books, magazines and other sources)

Feedback from internship supervisor(External and Internal)

Post internship, the faculty coordinator should collect feedback from industry about student with recommended parameters such as- Technical knowledge, Discipline, Punctuality, Commitment, Willingness to do the work, Communication skill, individual work, Team work, Leadership.....
