Telekinesis 2K23

- The Department of Electronics and Telecommunication of K.K. Wagh Institute of Engineering Education and Research, Nashik have organized Telekinesis 2K23 on 20th of May, 2023. All the students of E&TC department participated in the event. Events such as Project competition, Mini Project were organized for students.
- As the event was organized for a day so it was quite difficult for coordinators to manage but despite of all the event went quite well with the help of the mentor and coordinators.

The poster is for the 'Telekinesis 2k23 - Project Competition' organized by the Department of Electronics & Telecommunication Engineering at K.K. Wagh Institute of Engineering Education and Research. It is in collaboration with IETE. The event is held on 20th May, 2023, at the Electronics & Telecommunication Department. Keynote speakers are Dr. Jayant G. Joshi and Mr. Pushkar S. Hiray. The poster also mentions the celebration of World Telecommunication & Information Society Day. Logos for NEA, NMC, and AICTE are displayed at the bottom.

Telekinesis 2K23

Extending Warm Felicitations to Our Esteemed Guests

To mark this momentous occasion of telekinesis, department featuring 'Pinnacle' magazine

Project understanding and evaluation by Mr. Pushkar Hiray

Telekinesis 2K23

The judges carefully evaluated each project in the project competition, taking the time to visit and assess every participant's work.

Dr. Jayant Joshi personally handed over the awards to the well-deserving winners of the project competition, acknowledging their exceptional performance.

Mr. Pushkar Hiray personally handed over the awards to the winners of the project competition, acknowledging their exceptional performance.

Celebrating the Champions of Innovation and Ingenuity

Let's Not Panic

Every new technology has to be mastered to be useful in the long run to complement the human capabilities.

Humans have always learned and mastered new technologies, but the technologies themselves cannot outsmart humans.

There is a certain awe, a deep fear among the regular users of the Internet that the artificial intelligence (AI), particularly in its ChatGPT mode, unveiled recently, may take away human jobs significantly in the face of the already declining job-market. The underlying fears arise from two things that baffle humans – the speed of ChatGPT while responding to queries in just a few seconds; and the near-correct answers offered by it, mostly due to the built-in selectivity to pick up only relevant details as it runs through huge data available to it, before it composes the answer.

Let's Not Panic

Speed comes inherently from the speed of the chips used, a data storage and processing technology that has been developing at a brisk pace ever since the first chips appeared in 1965 or so. Humans have always been stunned by new technologies which suddenly quickened the pace of numerical calculations, or speed in communication of data. For instance, the Slide Rule, or the Friden Machine Calculator, both of which were non-digital tools that caught up big in 1960s, did make an impact by providing much faster calculations, than ever before. Then came in 1980s the hand-held digital calculators, at least for the four basic arithmetic functions, viz. addition, subtraction, multiplication and division. Though several other functions like percentage, and more complicated algebraic, logarithmic or trigonometric functions, like sine or cosine, were incorporated into the hand-held calculator soon after, universal acceptability of the simple palm-held calculator came among even uneducated shopkeepers relatively fast in 1980s or so, due to its utility.

Instant Communication by fax or email received public acceptance in less than a decade after their introduction, again due to its huge utility in business communications. Smartphones came and made a huge impact on everyday human life, by offering audio and video calls, GPS and so on to the whole humankind, inexpensively. Use of lasers to scan coded info at supermarkets also got quick acceptability due to the speed that it offered. Still, humans could not be sidelined totally by such technologies. Even to this date, the cashiers at shopping malls need to phone up, though rarely, to seek help from their database on pricing, when the laser scanner shows helplessness.

Selectivity while responding to a human user, in just a few seconds, after choosing just the relevant data, from the mounds lying stored on the Internet or the Cloud, makes ChatGPT truly awe-inspiring, and renders the Google search look like its poor cousin.

Let's Not Panic

Every new technology has to be mastered to be useful in the long run to complement human capabilities. Humans have always learned and mastered new technologies, but the technologies themselves cannot outsmart humans, in several specific aspects. For example, human emotions, including nuances of social and cultural parameters used conventionally by humans, cannot be exercised by chatbots or AI, or Machine Learning. Humans can look out of the window and make a reasonable prediction about the impending rains or a storm, vis-a-vis the most powerful computers deployed for weather forecasting, which often fail to make a reliable prediction for farmers or city-dwellers. Similarly, the translation from one language to another, made by computers, or chatbots leaves much to be desired. Humans use exact words from dialects, which are meaningful to local nuances while conversing or translating, and even aid it with gesticulations, a marvelous expertise, that is not easy to be beaten by Bots, so soon.

Cheating by humans, like withholding the natural reaction of either appreciating the correct response of the chatbots, or declaring that the response of the chatbot was not correct, gives humans an edge over chatbots. So, hang on. Humans have proven capacity to match and then master new technologies, historically. Let us not oppose the use of the chatbots, but rather employ them for socially and economically beneficial end-uses. After all, we could not stop the use of smartphones by schoolchildren. Could we? So, let us not panic at the advent of AI or ChatGPT, but wait to assimilate their usage in human endeavours.

Industrial Visits organized by Department for Students

Unraveling the Dynamics of a Nashik Road Railway Station through Industrial Visit

From witnessing the seamless coordination of trains arriving and departing to observing the dedicated staff managing various operations, this visit offers valuable insights into the functioning of one of the world's largest railway networks.

Industrial Visits organized by Department for Students

Insights into the art of effective Broadcasting through industrial visit to Radio Vishwas

From understanding the technical aspects of radio transmission to experiencing the creative process of producing captivating content, this visit offers an insightful glimpse into the functioning of a radio station.

Awards received by Students

The project "Sprinkler Changer Bot" developed by students of KK Wagh receives the prestigious first prize in the state-level exhibition cum competition for working models, held under the theme of agricultural technology.

- **Dnyanada Tikar**
- **Kashyap Malode**
- **Abhishek Bahadurkar**

The students of attained the remarkable achievement of securing the second position in the project competition organized by the Students Association of Robotics and Automation.

VISION

Provide quality education to create engineering professionals of global standards by keeping pace with rapidly changing technologies to serve the society.

MISSION

M1: To educate the students with the state-of-the-art technologies and value based education to meet the growing challenges of industry.

M2: To provide scholarly ambience & environment for creating competent professionals.

M3: To inculcate awareness towards societal needs.
